Excavation and rock removal for new Membrane Treatment Plant

Project Progress

Preparing Concrete Structural Caissons for the new Membrane Building

Deep Excavation for the New Membrane Building

Progress Since Last Update

- Completion of Interim Water Capacity measures, equipment is now being tested and commissioned.
- Drilling for caisson piles continues for excavation and foundation work.
- Excavation for new Membrane Treatment building is underway.
- Resumed dewatering operations during excavation. Sampling and testing of lake water and dewatering discharge were also resumed.
- The Public are reminded to please be mindful this is an active construction site with equipment entering and leaving regularly.
