Installation of equipment (pumps, piping, valves, electrical, mechanical) within the temporary Industrial Pumping Station.

Project progress

Installation of suction header piping between Intake No. 1 Chamber and the temporary Industrial Pumping Station.

Installation of rebar and formwork for the walls of Intake No. 1 Chamber

Progress Since Last Update

- Installation of pumps and pre- commissioning of the temporary Industrial Supply pump station has been completed.
- Drilling for caisson piles continues for excavation and foundation work.
- Completed installation of 600mm diameter industrial watermain and intake chamber.
- Construction dewatering and treatment as well as shoreline water quality sampling and monitoring continues.
- The Public are reminded to please be mindful this is an active construction site with equipment entering and leaving regularly.
