New Membrane Building excavation to Lower-Level. Temporary Bracing to Existing Raw Water Chamber for Lateral Support

Project Progress

Rock Anchor Installation in Membrane Building Excavation

Foundation Layout on Poured Concrete Working Slab in Membrane Building Excavation

Progress Since Last Update

- Completion of Interim Water Capacity measures, equipment is now in service with additional modifications ongoing.
- Excavation for new Membrane Treatment building is nearly complete.
- Resumed dewatering operations during excavation. Sampling and testing of lake water and dewatering discharge were also resumed.
- New Hydro service has been installed.
- The Public are reminded to please be mindful this is an active construction site with equipment entering and leaving regularly.
